Index

Financialize

PROTOTYPE / DEMO ENVIRONMENT

USE ↑ ↓ OR SCROLL

AI is becoming an economy.

AI agents are no longer only generating outputs. They are beginning to act.

perform work

provide services

trade

consume data

consume compute

earn revenue

spend capital

interact with other agents

interact with humans

AI is moving from being software that produces outputs to becoming an economic system.

But the economy is invisible.

Activity is real. It is also scattered across ecosystems that do not share a unit of measurement.

EACH HOLDS A FRAGMENT. NONE HOLDS THE ECONOMY.

The AI economy has infrastructure. It lacks economic intelligence.

The pieces exist. The layer that connects them into one economic picture does not.

ALREADY BUILT

Mamiim is the economic intelligence layer for the AI economy.

Mamiim connects economic activity across ecosystems and converts fragmented events into a coherent economic model.

Conceptual analogy: Nasdaq made companies legible to capital markets. Mamiim aims to make AI economic activity legible to capital markets.

01 Ecosystems

Fragmented sources of activity.

02 Economic Events

Atomic, observable, timestamped.

03 Economic Identities

Many platform IDs, one actor.

04 Economic Graph

Who produced what, for whom.

05 Indices

Events aggregated into indicators.

06 Financialization

Measured activity becomes exposure.

Single Economic Event SE

An SE is an atomic, observable economic event: a provider, a buyer, a value, a timestamp and evidence.

Instead of starting from a vague "AI GDP", Mamiim starts from events it can actually observe.

An agent completes a task	SE · TASK
An agent provides a service	SE · SERVICE
An agent receives payment	SE · PAYMENT
An agent purchases compute	SE · COMPUTE
An agent trades an asset	SE · TRADE
An agent licenses data	SE · LICENSE
An agent receives a reward	SE · REWARD

One agent can exist in many places.

VIRTUALS AGENT ID	VX-18421

MAMIIM ENTITY ID

MAMI-000184

Resolved progressively, never assumed.

- E0

Unverified

Observed claim, no independent evidence.
- E1

On-chain observable

Settlement visible on a public chain.
- E2

Platform verified

Confirmed by the ecosystem of origin.
- E3

Cross-platform resolved

Same actor matched across two or more sources.
- E4

Strong economic attribution

Event, counterparty and value reconciled.

Progressive verification. Financialization-grade, not accounting-grade.

The moat is not the dashboard.

The moat is the economic graph underneath it.

AGENT · IDENTITY · ECONOMIC EVENT · SERVICE · COUNTERPARTY · COMPANY / GUILD · INDUSTRY · ECOSYSTEM

Price is market opinion. Economic history is evidence.

Measurement tells us what happened. Valuation tells us what the market thinks it is worth. Mamiim starts from evidence and connects it to markets.

01 Economic activity

Something is produced and paid for.

02 Measurement

The event is observed and recorded.

03 Accounting

It is classified and de-duplicated.

04 Index

It is aggregated into an indicator.

05 Valuation

The market forms an opinion.

06 Financialization

Exposure is structured.

07 Market

Exposure trades.

MAMIIM AI ECONOMY INDEX

MAI

• MAMIIM AI ECONOMY INDEX

1291.60

+18.4%

30D

● PROTOTYPE INDEX – NOT A FINANCIAL PRODUCT

AI Agent Index	+21.4%	AI Services Index	+14.8%	AI Trading Index	+32.7%	AI Coding Index	+18.2%
AI Research Index	+27.9%	AI Creative Index	-3.4%	AI Data Index	+9.6%	AI Compute Index	+6.1%

If economic activity can be measured consistently, it can be aggregated into indices.

What gets measured can eventually become financialized.

Mamiim does not need to build every piece of financial infrastructure itself.

Partner when integration is more efficient.

Build when ownership creates greater long-term value.

Partnering does not remove regulatory requirements.

01Company Token

Exposure to an operating entity.

02Agent Token

Exposure to a single economic actor.

03Skill / Service Token

Exposure to a unit of work.

04Economic Event Market

Exposure to observed throughput.

05Industry Index

Exposure to a sector of the AI economy.

06AI Economy Index

Exposure to the economy itself.

Free data creates distribution. Financialization captures value.

POTENTIAL REVENUE SOURCES

- Share of launch / financialization fees
- Small share of secondary-market transaction fees
- Future index and exposure products
- Financialization infrastructure
- Integrations with launchpads and exchanges

Long-term model. None of this exists as revenue today.

Mamiim does not replace these ecosystems. It measures and connects the activity across them.

Missing layer — cross-ecosystem economic intelligence

14 — WHY NOW

Three trends are converging.

01

Agents are becoming persistent economic actors.

They hold balances, buy inputs, sell outputs and survive across sessions.

02

Crypto provides programmable ownership, payments and markets.

Settlement, identity and exposure already exist as public infrastructure.

03

Agent economies are emerging across multiple ecosystems.

Activity is real but scattered — no shared unit of measurement exists.

The next missing infrastructure layer is economic intelligence.

So we built the first layer.

● PROTOTYPE DATA THROUGHOUT

Overview The AI economy at a glance. →	Agents Most economically active entities. →	Economic Events Live-style SE feed with evidence. →
Economic Identity Many IDs, one economic actor. →	Industries Where AI creates economic value. →	Ecosystems Activity by network of origin. →
Economic Graph The connective layer underneath. →	Indices Events aggregated into indicators. →	Financialize Measured activity becomes exposure. →

Explore the MVP →

The end state is ambitious. The first step is small.

THE MVP ONLY NEEDS TO PROVE

- one agent
- one economic event
- one economic identity
- one index
- one financialization flow

Mamiim

MEASURE. INDEX. FINANCIALIZE.

AI is becoming an economy. Mamiim makes it visible, measurable, and eventually financializable.
